

# Tech Valley comes to BH-BL

A **Community Forum** to examine how GLOBALFOUNDRIES, the Semiconductor Industry and the 21st Century Technology Revolution are already changing

- Our community
- Our schools and
- Our children's future careers.

Tuesday, November 16, 7:30 - 9:30 pm  
O'Rourke Middle School Cafetorium  
173 Lakehill Road, Burnt Hills

**T**hat global economy we've all been reading about has arrived, and it's right here on BH-BL's doorstep.

Billions of dollars are being spent to build the GlobalFoundries computer "chip fab" plant in Malta. This will result in thousands of new jobs at both GlobalFoundries and the many other firms already buying land and signing leases to support the chip fab, which is located only five miles from our school district.

And the technology making all this growth possible is not impacting just careers in science and math. From food service and entertainment to government, medicine and communications, 21st century technology has exploded and continues to change just about every career field there is.

BH-BL parents, students, residents and staff are invited to a Community Forum at the O'Rourke Middle School on November 16 to learn what the global economy means for our schools and for our students' future careers.

Come hear Mike Russo from GlobalFoundries and a panel of distinguished guests talk about the new career skills 21st century employers are looking for, and about new ways that businesses will be partnering and interacting with schools in this economy.

Presenters on Nov. 16 will include Mr. Russo, representatives from GE Energy, the Hudson Valley Community College Biotechnology program, and others.
